

Hamilton Drum Seeder

The belt conveyor system has variable speed as standard, and is aimed at high production growers with an exceptional high capacity for continuous, accurate single or clump sowing. Assesories include dibblers, vermiculite coverer and a watering bar.

The sowing drum can be drilled to sow into 2 different tray sizes or 2 different hole sizes for one model tray. The Drum seeder is available in a 2.0m and 2.8m conveyor.

Technical Specification

Typical speed 740 trays per hour – 400 x 600mm tray.

Power Consumption 1.5 kW single phase.

Air Consumption Compressor of 200-250 liters/min is recommended (5 bar max)
