

FARMING EQUIPMENT

NATURAL SEEDER

The standard 18 row seeder comes complete with a 0.3mm nozzle bar, glass jar seed collection vacuum cleaner, vacuum reduction adaptor, nozzle cleaning wires, seed stop screws, a set of hexagon wrenches, a sheet metal hole punch for making row spacing plates, three blank row spacing plates, an operators' manual and nylon tubing for compressor and indexer connections.

The Natural Seeder will enable you to sow up to 120 trays per hour with an accuracy of 99.9% singulation depending on seed and variety. The newest range of Natural Seeders is air and electrically operated. A compressor with a minimum output of 4 cu.ft/min. (100 l/m) at 80psi (5.5 bar) is recommended.

It includes the Pick-up Dwell Control which allows the nozzle bar to dwell in the seed tray for an adjustable pre-determined period, giving the last few seeds of a seeding run the necessary time to be carried into the air flow of the nozzles for pick-up. This system virtually eliminates the "misses" right down to the last few seeds in the tray. It further also gives you the option of multi-sowing.
